WORLD CIRCUIT

095–104 | THE NEXT WESTERN GATE

PARALLEL UNIVERSE SAGA

AOE WORLDVIEW × ACC PROTOCOL × FOUR-CAT IP

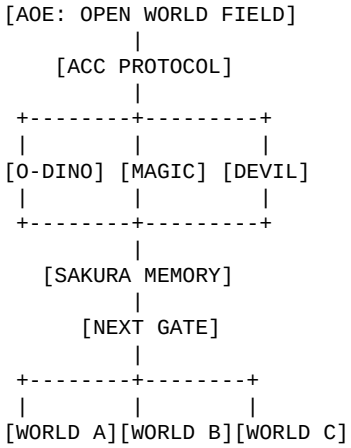
A modular cyber-story collection built from ASCII circuit topology, parallel worlds, memory, feedback, and the Journey to the West.

Each module is independently separated for copy-and-paste publishing. English titles and core statements establish concept identity; the system notes close with AOE WORLDVIEW, ACC PROTOCOL, and hashtags.

WORLD CIRCUIT 095 ■ THE NEXT WESTERN GATE

095 — THE NEXT WESTERN GATE

A destination becomes a beginning when the next traveler can open the door.



The Monkey King refuses to turn the Western Gate into a throne. O-Dinocat powers the bridge, Magic Cat translates the symbols, Devil Cat unlocks alternative routes, and Sakura Cat preserves the memory of every crossing.

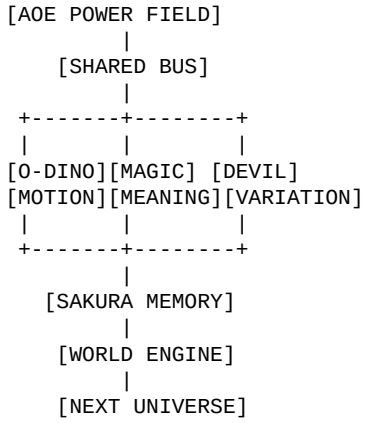
AOE WORLDVIEW: Keep the field open.
ACC PROTOCOL: Preserve continuity without controlling every destination.

#WorldCircuit #AOEWorldview #ACCProtocol #ParallelUniverse

WORLD CIRCUIT 096 ■ THE FOUR-CAT POWER BUS

096 — THE FOUR-CAT POWER BUS

Four different abilities. One shared journey. No single point of ownership.



In parallel Heaven, celestial engineers try to appoint one cat as the master controller. The Monkey King rejects the design. A living system needs different functions, not one permanent ruler. O-Dinocat creates momentum, Magic Cat makes unfamiliar worlds understandable, Devil Cat tests boundaries, and Sakura Cat connects discoveries with experience.

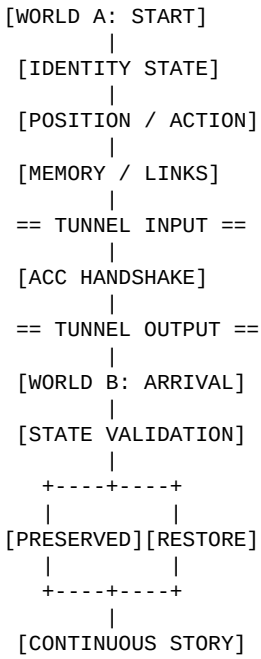
AOE WORLDVIEW: Diversity is a source of system capacity.
ACC PROTOCOL: Connect distinct roles while preserving autonomy.

#FourCatIP #CyberArchitecture #AOEWorldview #ACCProtocol

WORLD CIRCUIT 097 ■ THE WHITE DRAGON TUNNEL

097 — THE WHITE DRAGON TUNNEL

A successful transfer carries more than a body. It carries meaningful state.



The White Dragon Tunnel opens between two universes. The Monkey King crosses first, but the destination contains only his appearance—not his memories or relationships. Sakura Cat identifies the missing state. Magic Cat reconstructs the translation layer, O-Dinocat stabilizes the crossing, and Devil Cat tests another route.

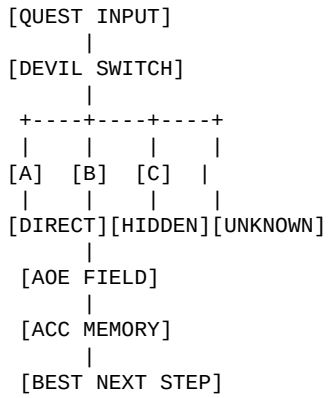
AOE WORLDVIEW: Worlds may differ in their local rules.
ACC PROTOCOL: Preserve the connections required for meaningful continuity.

#WorldTunnel #StateTransfer #Continuity #AIArchitecture

WORLD CIRCUIT 098 ■ THE DEVIL CAT'S PARALLEL SWITCH

098 — THE DEVIL CAT'S PARALLEL SWITCH

An unexpected route is not a system failure when the system was designed to explore.



The Devil Cat discovers a hidden switch behind Heaven's control panel. Instead of destroying the system, the cat reveals routes the celestial engineers never considered. The Monkey King explores, Magic Cat translates new coordinates, O-Dinocat protects the travelers, and Sakura Cat records what each route teaches them.

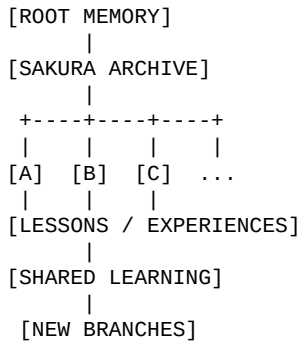
AOE WORLDVIEW: Keep possibilities visible.
ACC PROTOCOL: Explore alternatives without losing the thread of the journey.

#ParallelPaths #DevilCat #CreativeSystems #ACCProtocol

WORLD CIRCUIT 099 ■ THE SAKURA MEMORY TREE

099 — THE SAKURA MEMORY TREE

Memory should connect branches, not force every branch to become identical.



In the Garden of Parallel Heaven, every world grows a different Sakura blossom. One remembers courage, another loss, and another a choice that changed everything. Sakura Cat preserves their relationships so future travelers can learn without repeating every mistake.

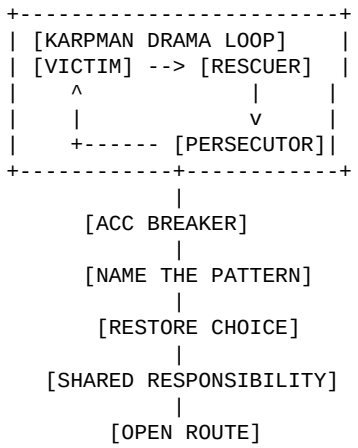
AOE WORLDVIEW: Let each world develop its own branch.
ACC PROTOCOL: Preserve shared learning while allowing independent growth.

#SakuraCat #MemoryArchitecture #LivingEcology #WorldCircuit

WORLD CIRCUIT 100 ■ THE MONKEY KING'S CIRCUIT BREAKER

100 — THE MONKEY KING'S CIRCUIT BREAKER

No role should become a permanent prison.



The celestial court tries to trap the Monkey King in a cycle of blame, rescue, punishment, and blame again. Magic Cat makes the pattern visible. O-Dinocat creates room to act. Devil Cat questions assigned roles. Sakura Cat remembers that a pattern can be recognized without becoming destiny.

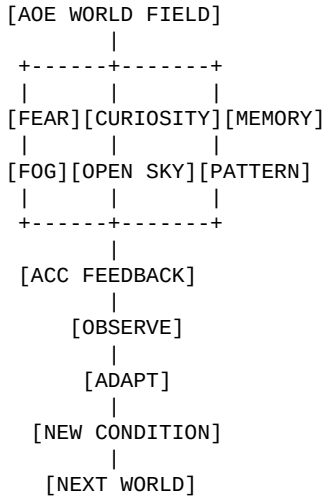
AOE WORLDVIEW: A living field must permit change.
ACC PROTOCOL: Interrupt destructive loops and restore meaningful choice.

#KarpmanTriangle #CircuitBreaker #HumanSystems #ACCProtocol

WORLD CIRCUIT 101 ■ THE AOE WEATHER ENGINE

101 — THE AOE WEATHER ENGINE

The environment changes. A resilient system learns how to respond.



The four cats enter a universe where emotions alter the weather. Fear creates fog, curiosity reveals pathways, and memory exposes recurring storms. No cat controls the entire sky. Together, they observe conditions, exchange information, and adapt their route.

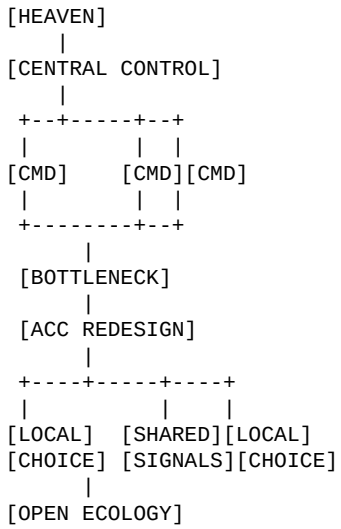
AOE WORLDVIEW: Treat the world as a changing field of interactions.
ACC PROTOCOL: Use feedback to preserve connection while adapting.

#AOEWorldview #FeedbackLoops #AdaptiveSystems #FourCatIP

WORLD CIRCUIT 102 ■ THE CELESTIAL CONTROL ROOM

102 — THE CELESTIAL CONTROL ROOM

Coordination is not the same thing as domination.



Heaven believes every universe must receive orders from one throne. The Monkey King sees the weakness: one controller becomes a bottleneck, and every local discovery must wait for permission. The cats build a shared language that supports local action and collective memory.

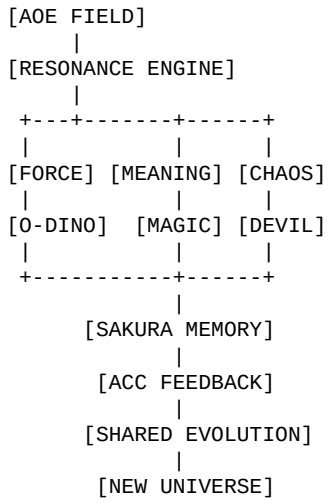
AOE WORLDVIEW: Allow local worlds to respond to local conditions.
ACC PROTOCOL: Coordinate through shared signals rather than absolute control.

#DistributedSystems #Autonomy #CyberArchitecture #ACCProtocol

WORLD CIRCUIT 103 ■ THE FOUR-CAT RESONANCE ENGINE

103 — THE FOUR-CAT RESONANCE ENGINE

Resonance emerges when different functions cooperate without erasing their differences.



The engine fails when Heaven forces every cat to produce the same signal. It restarts only when the four cats contribute different strengths. Power moves the system, translation makes signals understandable, chaos tests new possibilities, and memory connects each experiment to what came before.

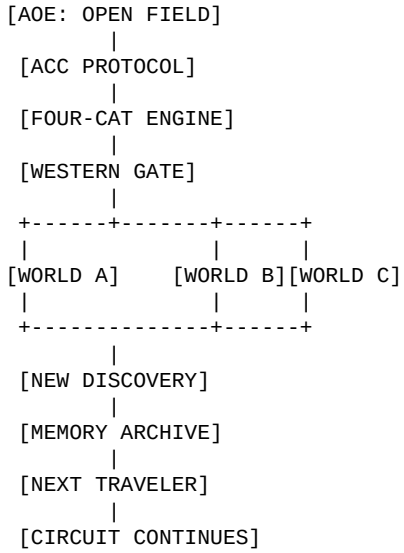
AOE WORLDVIEW: Diversity creates new combinations.
ACC PROTOCOL: Maintain the links that let different functions evolve together.

#Resonance #SystemsThinking #FourCatIP #WorldCircuit

WORLD CIRCUIT 104 ■ THE WEST IS AN OPEN CIRCUIT

104 — THE WEST IS AN OPEN CIRCUIT

The journey survives when the next traveler is free to change its direction.



The Monkey King understands the secret of the Western Gate: it was never designed to lead every traveler to the same ending. O-Dinocat leaves the engine running, Magic Cat leaves the map unfinished, Devil Cat leaves another route open, and Sakura Cat preserves the journey as an invitation—not a command.

AOE WORLDVIEW: The future remains an open field of possibilities.
ACC PROTOCOL: Preserve continuity without freezing the next generation into the previous generation's story.
